DSPM

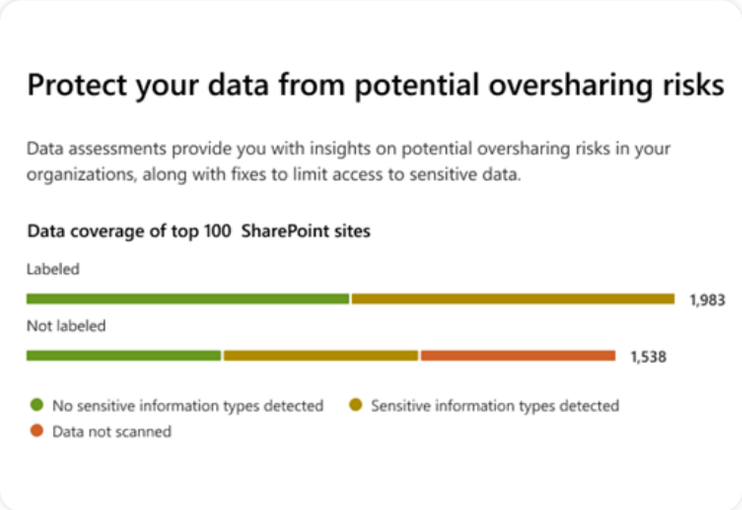
In a nutshell

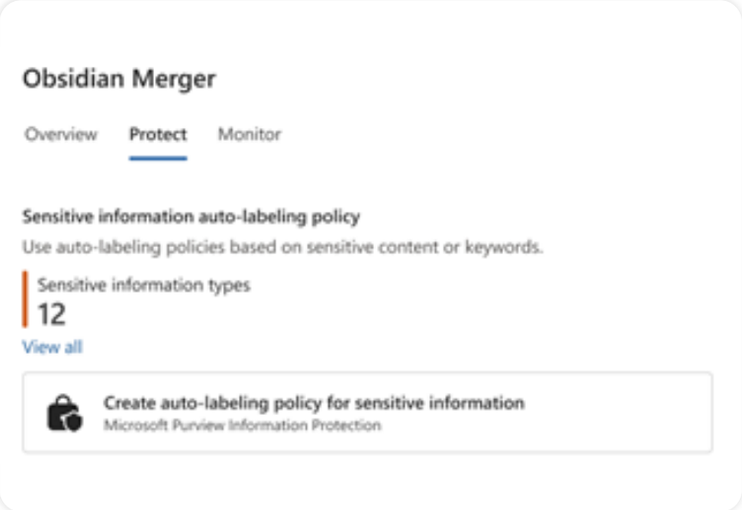
- Discover, assess and reduce risk
- Focused on data not infrastructure
- Unified visibility into data
- Provides actionable recommendations
- Supports AI adoption

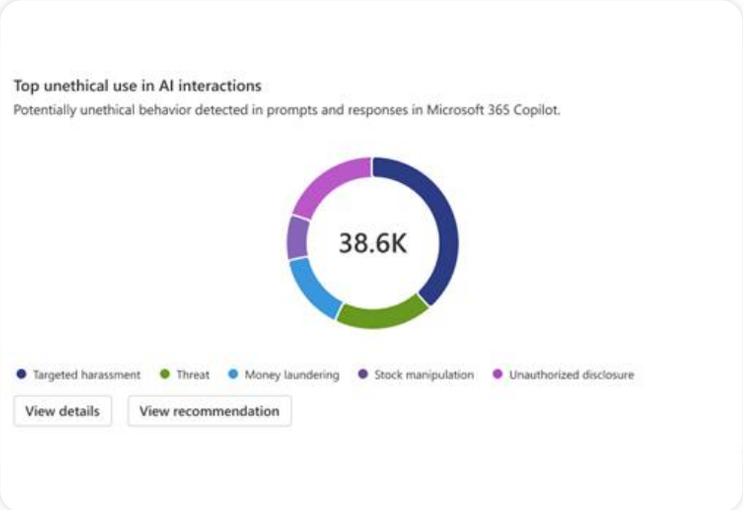
Identify and mitigate risks related to AI usage

Oversharing assessment in Data Security Posture Management (DSPM) for AI

Proactively strengthen data security to help prevent incidents like data oversharing, leakage, or unethical use







Discover data security, safety, and compliance risks in **reports and oversharing assessments**

Protect sensitive data from overexposure with suggested policies and **one click application of sensitivity labels**

Govern AI usage for **non-compliant or unethical usage** and get recommendations on enforcing compliance policies

Data assessments (preview)

Identify oversharing risks

Use data assessments to identify potential oversharing risks in your organization. They also provide fixes to limit access to sensitive data.

Assess and prevent oversharing

1. **Create an assessment**
   Choose the sources and users you want to assess.
2. **Evaluate data**
   Review the assessment for potential oversharing risks within the sources and users.
3. **Apply remidiations**
   Limit Microsoft Copilot access to sensitive data, apply label and retention policies to sites and data. Conduct site and access review to evaluate site permissions and user access.

Overview | **Protect** | Monitor

Limit Microsoft 365 Copilot access to this site

Choose how you would like Copilot to access data in this SharePoint site.

Restrict access by label
Microsoft Purview Data Loss Prevention

Restrict all items
SharePoint Restricted Content Discovery

SharePoint Administrators or Global Administrators can enable Restricted Content Discoverability in SharePoint Online in your organization.

Steps at a glance

1. **Download and install SharePoint Online Management Shell.** Download the latest version of SharePoint Online Management Shell
2. **Connect to SharePoint Online as a Global Administrator or SharePoint Administrator in Microsoft 365.** To learn how, see Getting started with SharePoint Online Management Shell
3. **Apply Restricted Content Discoverability on a SharePoint site.** Run the following command in SharePoint Online Management Shell:

```
Set-SPOSite -identity <site-url>
-RestrictContentOrgWideSearch $true
```

4. **View the Restricted Content Discoverability configuration for a given site.** Run the following command in SharePoint Online Management Shell:

```
Get-SPOSite -identity <site-url> | Select
RestrictContentOrgWideSearch
```

Limit Microsoft 365 Copilot access to this site

Choose how you would like Copilot to access data in this SharePoint site.

Restrict access by label
Microsoft Purview Data Loss Prevention

Restrict all items
SharePoint Restricted Content Discovery

Use a Microsoft Purview Data Loss Prevention policy to limit access to any files in your organization with sensitivity labels.

Steps at a glance

1. **Go to the Data Loss Prevention in Microsoft Purview portal**
2. **Create new policy.** Select "Policies" to create a new policy
3. **Choose a custom policy.** Select Custom policy in the Custom category
4. **Customize your policy.** Name your policy, and then select "Microsoft 365 Copilot" in the location
5. **Create a new advanced DLP rule.**
6. **Add labels you want to exclude.** In the fields for the new rule, select "Content contains sensitivity labels" and add the labels
7. **Select an action.** Choose "Exclude Copilot from processing"
8. **Save the rule and the policy.**

Other labeling policies

Default sensitivity label for SharePoint document library

When a default sensitivity label is added to a SharePoint document library, the label will only apply to new items added to the site. Navigate to library settings on the SharePoint site and select a sensitivity label.

Microsoft Purview Data Lifecycle Management

Microsoft Purview DSPM – Licensing Summary		
DSPM Capability	*Required Licence*	*What this Enables*
Access to DSPM (core experience)	**Microsoft 365 E5** or **Microsoft Purview Suite**	Access to the DSPM dashboards, posture views, insights, and recommendations.
DSPM posture insights & recommendations	**Microsoft 365 E5** or **Purview Suite**	Risk-prioritised insights and guided recommendations based on correlated Purview signals.
DSPM for AI (Copilot & agent visibility)	**Microsoft 365 E5 / E5 Compliance** or **Purview Suite**	Visibility into AI-driven data access, oversharing, and agent activity across Copilot and AI apps.
Security Copilot integration (optional)	**Microsoft Security Copilot** add-on	Natural-language investigation and faster triage of DSPM-identified risks (optional but high-value).
Cross-cloud / non-M365 data coverage	**Purview PAYG connectors**	DSPM insights for non-Microsoft data sources (e.g. Fabric, Azure SQL, third-party SaaS/IaaS).

Capabilities of M365 BP

Area	*What M365 BP Provides*	*How This Relates to DSPM*
Basic sensitivity labels	Manual sensitivity labelling (Azure Information Protection P1)	Labels applied under BP can later be analysed by DSPM to assess protection coverage.
Core DLP (M365 workloads)	DLP for Exchange, SharePoint, OneDrive (no endpoint, no advanced analytics)	Generates limited data protection signals that DSPM would consume if licensed.
Basic audit logging	Standard unified audit log (limited retention)	Provides low-fidelity activity data that DSPM could reference at a high level.
Defender for Business	Endpoint security & basic device signals	Indirect benefit only — **not directly used by DSPM**, which is data-centric.
Purview portal access	Visibility to Purview compliance portal	Admin access exists, but DSPM blades and insights are **not available** without E5.

DSPM capabilities that BP customers do not get

Missing Capability	*Why It Matters*
DSPM dashboards & posture view	DSPM itself requires **M365 E5 or Purview Suite**. BP tenants cannot see posture scores, objectives, or recommendations.
DSPM recommendations & objectives	No risk-prioritisation, no guided remediation, no posture trending.
DSPM for AI (Copilot & agent observability)	No visibility into Copilot prompts, AI data access, oversharing, or agent activity.
Insider Risk analytics	Required for correlating user behaviour with data risk — not included in BP.
Advanced DLP analytics	No policy effectiveness scoring, risk trend analysis, or posture correlation.
Security Copilot integration	DSPM investigation workflows require Security Copilot + E5/Purview Suite.

DSPM Capabilities Provided by Purview Suite (with M365 BP)

DSPM Capability	*What You Get with Purview Suite Add-on*
DSPM access	Full access to Microsoft Purview **Data Security Posture Management** (DSPM) experience, including dashboards and posture views
Unified posture view	Centralised visibility of sensitive data risks across Microsoft 365 workloads (SharePoint, OneDrive, Exchange, Teams)
Data security objectives	Outcome-based DSPM objectives (e.g. prevent oversharing, reduce unprotected sensitive data) with guided workflows
Risk-prioritised insights	DSPM-generated insights highlighting **unprotected, over-exposed, or high-risk sensitive data**
DSPM recommendations	Actionable remediation recommendations surfaced via DSPM (e.g. where to apply labels, DLP, or access changes)
Posture trends & analytics	Trend reporting showing improvements or regressions in data protection posture over time

DEMO

Take aways

- Single view of data security
- More than just reporting
- Helps identify risk
- Strengthens AI security
- Works with other Purview tools
- Ongoing use
- Provides priority
