- What's New in Copilot in SharePoint: August 2026
 - <https://techcommunity.microsoft.com/blog/spblog/whats-new-in-copilot-in-sharepoint-august-2026/4535421?>

THE SHIFT

Copilot lives where the work happens

Chat is the front door, not the whole house. Copilot sits inside the apps you already use, with your files, your meetings, and your permissions.

In the flow of work

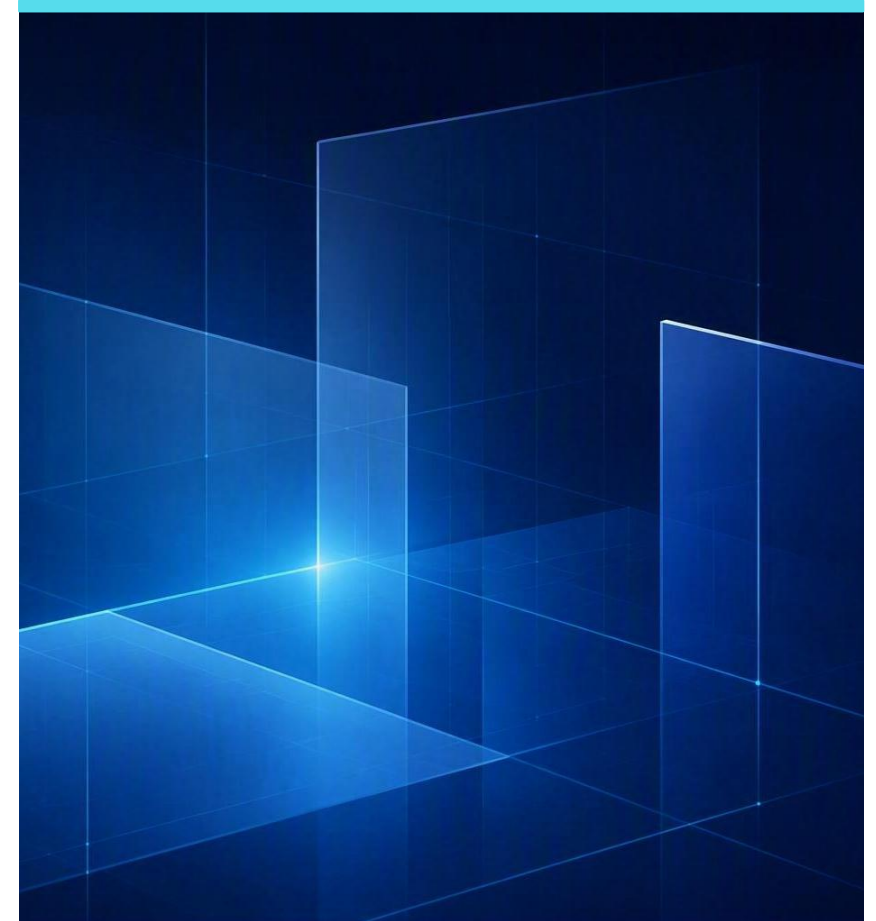

Invoke Copilot from the ribbon in your active app — no exporting, pasting, or context switching.

Grounded in your content

Answers draw on your documents, mail, and meetings, respecting the permissions you already have.

Agentic, not just conversational

Agents run multi-step work — drafting, analyzing, scheduling — with your approval at each step.

Word and Excel

WORD

Draft, rewrite, refine

- Draft documents from a short prompt or an existing file
- Rewrite, summarize, and polish content inline as you write
- Agent Mode handles iterative, multi-step document creation

EXCEL

Ask your data questions

- Natural-language analysis and formula generation
- Pivot tables and charts from a plain-English request
- Intelligent editing and Python scripting on request

PowerPoint, Outlook and Teams

POWERPOINT

- Build decks from a prompt, a Word document, or your org's template
- Refine slides iteratively with Agent Mode
- Pull approved visuals from Organizational Asset Libraries

OUTLOOK

- Draft, summarize, and prioritize email
- Coaching on tone and clarity before you send
- Inbox triage and help scheduling meetings

TEAMS

- Intelligent Recap with summaries, action items, and timeline markers
- Real-time transcription with multilingual translation
- Catch up on a busy chat with a one-line summary

Teams Intelligent Recap is the most-used Copilot feature, at 72% adoption.

Agent Mode: from prompt to finished work

Agent Mode turns a single request into an iterative work session inside Word, Excel, and PowerPoint — Copilot plans, builds, checks its own output, and refines.

01

You ask

Describe the outcome you want in plain language, in the app you're already in.

02

Copilot plans

It breaks the request into steps and works through them iteratively.

03

It builds

Content, analysis, or slides are created directly in your file.

04

You approve

Copilot Cowork extends this to multi-step tasks — emails, meetings, documents — with your sign-off.

Researcher and Analyst

Two specialist agents come with a full Microsoft 365 Copilot licence. If you don't see them, search for them under More agents.

RESEARCHER

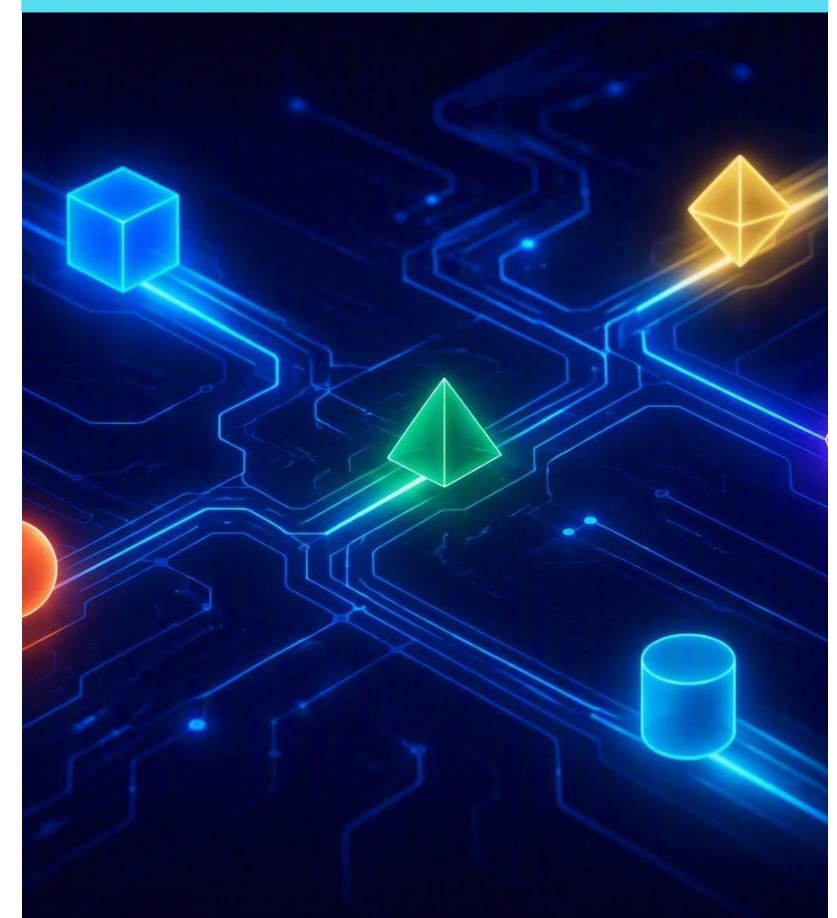

Deep research on demand

Give it a topic and it works through the question like a subject-matter expert sitting beside you. Add work content, upload images, and point it at the specific sources you trust.

ANALYST

Your data, reasoned through

The analytical counterpart to Researcher — it reasons over the data you supply rather than the documents you read, using the same prompt-driven interface.

Pages and Notebooks

Copilot's output doesn't have to stay trapped in a chat thread. Pages and Notebooks give your work a place to live and be shared.

COPILOT PAGES

A shared AI canvas

- Move a good Copilot answer onto a page your team can edit together
- Sits alongside native co-authoring in Word, Excel, and PowerPoint
- Keeps the thinking visible instead of buried in one person's chat history

COPILOT NOTEBOOKS

Persistent context

- Add files, OneNote pages, or web links as references
- Attach a Word doc, a spreadsheet, a deck, and your own OneNote notes
- Copilot grounds answers in the first 20 references — lead with what matters most

MAKE IT YOURS

When you want an agent of your own

Copilot Studio is the low-code place to build custom agents — no development background required to get started.

Declarative agents

Extend Copilot with your own knowledge sources and instructions — an HR policy bot grounded on the company handbook, for example.

Custom engine agents

Autonomous agents built with Power Platform connectors, workflows, and Dataverse integration.

1,400+ connectors

Reach Salesforce, SAP, ServiceNow, and other systems, plus Model Context Protocol support for external tools.

IN PRACTICE

A sales team's "Deal Assistant" checks deal status in Salesforce, pulls contract templates from SharePoint, drafts a proposal summary in Word, and emails stakeholders.

WHERE TO START

Three habits worth building this week

1

Start in the app

Next time you'd open a chat window, click the Copilot icon in the ribbon instead and stay in your file.

2

Hand over a whole task

Try Agent Mode or Researcher on something you'd normally set aside a morning for.

3

Give Copilot context

Set up a Notebook for a live project and add your most important references first.

Copilot is only as useful as the work you hand it.

DEMO

Takeaways

- Start in the app you are already working in
- Grounded in your files, mail and meetings
- Use Agent Mode to hand over whole multi-step tasks
- Use Researcher and Analyst for deeper reasoning
- Use Notebooks to give Copilot lasting project context
- Extend Copilot to your own data with Copilot Studio
- Keep a human in the loop to approve agent output
