Data

The Illusion of Progress

- Copilot deployed
- Agents built
- Automation running

But underneath the surface:

- Files still everywhere
- Permissions still messy
- Naming still inconsistent

“You’ve automated chaos.”

The 5 Root Causes of M365 Mess

1.No file structure strategy

- SharePoint vs OneDrive confusion still exists — yes, since 2016

2.Permissions drift

- Broken inheritance everywhere, with no regular review

3.Too many entry points

- Teams, SharePoint, OneDrive, Loop... users don't know where things live

4.No lifecycle

- Nothing gets archived or deleted

5.AI on top of bad data

- Copilot just surfaces the mess faster

What “Good” Looks Like in 2026

- Fewer locations, not more
- Predictable structure
- Clear ownership
- A default-deny mindset
- AI built after structure, not before

The Fix: The “30-Day Reset” Model

Week 1 — Assess

- Identify the top 3 SharePoint sites and Teams
- Audit permissions

Week 2 — Clean

- Clean up file structures
- Remove duplication

Week 3 — Secure

- Lock down sharing and access rules

Week 4 — Enable

- Introduce Copilot and Agents on clean data

The MSP Takeaway

“Your job isn’t to deploy more Microsoft 365.
Your job is to make what’s already there actually work.”

DEMO

Takeaways

- Fix permissions and over sharing
- Create a proper informational architecture
- Improve naming conventions
- Use metadata instead of folders where possible
- Remove stale content
- Identify authoritative sources
- Apply sensitivity labels
