SharePoint Skills

AI IN SHAREPOINT

Introduction to SharePoint Skills

Turning repeatable AI workflows into reusable assets your whole team can run.

PUBLIC PREVIEW

Robert Crane • CIAOPS

What are SharePoint skills?

A skill turns a **repeatable, multi-step workflow** in AI for SharePoint into a reusable asset others can run on the same site.

Instead of typing the same long prompt every time, you save the steps and your organisation's rules once — then reuse them.

Reusable

Save a workflow once; run it again and again.

Multi-step

Chains AI actions into one reliable sequence.

Part of AI in SharePoint

The capability formerly called Knowledge Agent.

IN ONE LINE

*“A skill captures your **know-how** so AI in SharePoint performs a task the same way, every time.”*

More consistent than one-off prompts.

Why skills matter

Consistency, not guesswork

Bake in your document standards and review checklists so results don't vary prompt to prompt.

Reuse, don't repeat

Capture a complex workflow once, then share it with everyone who has access to the site.

Built in plain language

Create a skill by describing the steps in chat — no code, no developer required.

Loads automatically

AI in SharePoint picks the right skill for your request, or you can call it by name.

What a skill can — and can't — do

It CAN

-  **Understand & summarise content**
Read and digest the documents on a site.
-  **Organise files & folders**
Sort, move and tidy library content.
-  **Work with lists**
Read and update SharePoint list items.
-  **Chain steps together**
Combine built-in actions into one flow.

It CAN'T

-  **Connect to external systems**
It stays inside SharePoint only.
-  **Run custom code**
No scripts or custom logic.
-  **Expand your access**
It only does what you already can.
-  **Add new capabilities**
Limited to what AI in SharePoint offers.

Creating a skill

EXAMPLE PROMPT

“Create a skill to review contracts for a valid lawyer ID in the xxx-xxx format. If a contract is invalid, add its file name to an ‘Invalid Contracts’ list — creating that list if it doesn't already exist.”

Running a skill

1

Select your files

In the library, pick the documents to act on — optional, but great for testing.

2

Ask, or call it by name

Give an instruction that matches the skill, or say “Run <skill> on the selected documents.”

3

Watch it load

AI in SharePoint loads the right skill — confirmed by the skill indicator card in chat.

4

Fill in the blanks

Provide any extra details the agent asks for, and let it complete the work.

Where skills live

Plain Markdown files

Each skill is a simple .md file you can read and review.

The Agent Assets library

Product-managed, created for you, and can't be deleted.

Manage via chat

Create and edit skills in chat — or edit the file directly, keeping its format intact.

HOW A SKILL IS STORED

Agent Assets

Skills

<skill-name>

SKILL.md

/Agent Assets/Skills/<skill-name>/SKILL.md

Governance and permissions

Native — nothing to switch on

Skills are built into AI in SharePoint; there's no separate admin control.

Permission-based

Edit permission lets a user create a skill; View permission lets them run it.

Standard file governance

Apply permissions, retention, sensitivity labels and auditing as you would any file.

Tighten when you need to

Break inheritance on the Agent Assets library for a more restrictive model.

Prerequisites & preview status

Opt in to the preview

Turn on the AI in SharePoint public preview at the site — or tenant — level.

The right permissions

Edit permission to create skills; View permission to run them.

An enabled site

Access to a SharePoint site where AI in SharePoint is available.

Heads up: sites that aren't opted in don't receive preview benefits. Skills were previously part of the Knowledge Agent.

YOUR NEXT STEPS

Getting started with skills

1

Opt a site in

Enable the AI in SharePoint preview on a real site.

2

Spot a routine

Find a repeatable task — a review check or a sorting rule.

3

Describe it in chat

Create your first skill in plain language, then test it.

4

Govern it

Manage the Agent Assets library like any other content.

Remember

A skill only does what you already can. It makes your AI consistent — not more powerful.

In a nutshell

- Turn a repeatable, multi-step workflow into a reusable asset
- Still early days — available now in public preview
- Create a skill in plain language from chat — no code required
- Each skill is stored as a SKILL.md file in the Agent Assets library
- AI in SharePoint loads the right skill automatically, or call it by name

DEMO

SharePoint Skills Takeaways

- Turns a repeatable, multi-step AI workflow into a reusable asset
- Created in plain language from chat — no code or developer needed
- Loaded automatically by AI in SharePoint, or called by name
- Stored as simple SKILL.md files in the Agent Assets library
- Governed with standard SharePoint permissions, retention, and labels
- Makes your AI consistent — it only does what you already can
